Professional Summary

DevOps/SRE Engineer with 2 years of hands-on experience deploying, scaling, and monitoring production workloads on AWS and Kubernetes (EKS). Proficient in building resilient CI/CD pipelines using Jenkins, Spinnaker, Helm and ArgoCD with a focus on multi-environment and multi-region deployments for microservices.

Skills

Cloud & Infrastructure: AWS EKS, ECR, S3, Lambda, IAM, Secrets Manager, CloudWatch, CloudFormation

Containers & Orchestration: Kubernetes, Docker, Helm

CI/CD & DevOps: Jenkins, Spinnaker, Argo CD, GitOps, CI/CD Automation

Observability & SRE: Prometheus, Grafana, Telegraf, OpenTelemetry, Distributed Tracing, Synthetic Monitoring

Programming & Scripting: Python, Bash, C++, JavaScript

Systems: Linux

Experience

Pine Labs | Senior Software Engineer

August 2026 - Present

- Own production reliability for 10+ microservices across 4 AWS EKS clusters spanning 3 regions, standardizing deployment workflows via Helm and Argo CD (GitOps), cutting manual configuration effort by 70% and improving release consistency across dev/staging/prod environments.
- Built and rolled out Checkly-based synthetic monitoring covering 50+ production APIs and endpoints, with scheduled multi-region checks, response-time SLO tracking, and automated alerting, reducing mean-time-to-detection (MTTD) for API failures and eliminating reliance on user-reported incidents.

Pine Labs | Software Engineer

October 2024 - July 2026

- Developed and maintained Jenkins CI/CD pipelines for 15+ Java microservices across multiple environments, automating artifact creation, Docker builds, security scanning, Amazon ECR publishing, and deployments.
- Designed and implemented an end-to-end observability stack using Prometheus, Grafana, Loki, OpenTelemetry, and Grafana Tempo, with 20+ dashboards and 50+ alerts, cutting mean-time-to-resolution (MTTR) by 80% and improving visibility into application health, distributed traces and enabling faster root-cause analysis.
- Orchestrated multi-region, multi-environment deployments using Jenkins, Spinnaker, Docker, Kubernetes, and Helm for 15+ services, improving release consistency and reducing rollback incidents by 90%.

Pine Labs | Software Engineer Intern

Feb 2024 - September 2024

- Built and maintained observability solutions using Grafana, Prometheus, Telegraf, InfluxDB, and Kapacitor (TICK stack), creating dashboards and alerts to improve infrastructure and application visibility.
- Gained hands-on experience with Linux, Docker, Kubernetes, AWS, and CI/CD, supporting troubleshooting and operational activities for containerized applications.

Education

Bachelor of Technology

July 2019 - May 2023

National Institute of Technology, Jalandhar, Punjab

Intermediate

April 2015 - March 2017

Saraswati Shishu Mandir Senior Secondary School, Gorakhpur

Achievements

- Migrated Grafana from EC2 to EKS using Grafana Operator, Helm, and Argo CD, reducing 80% deployment time.
- Implemented Velero-based backup and disaster recovery for Kubernetes workloads on EKS, enabling automated cluster resource and application backup and supporting recovery from infrastructure or deployment failures.
- Designed and implemented end-to-end distributed tracing for CloudFront, AWS WAF, and Application Load Balancer using OpenTelemetry Collector and Grafana Tempo, enabling request-level visibility across the infrastructure and application stack.
